

SharePoint 2010 Prototype with Sogeti

A prototype will allow you to validate the SharePoint 2010 functionalities and will show you the feasibility of a SharePoint architecture within your organization.

SOGETI's SharePoint experts will gladly help you in the creation of such a prototype.

The SharePoint 2010 platform will soon be launched. The Beta-version is already available by November of 2009 and it will be the ideal tool for you to set up a SharePoint 2010 prototype, which will allow you to...

- **Test and validate the new functionalities of the last SharePoint version.**
- **Receive useful feedback from your end-users in early adoption-stage**
- **Evaluate technical choices to be made in order to integrate SharePoint 2010 in your organization's ICT environment.**

SOGETI is the partner in the creation of your SharePoint 2010 prototype. Our SharePoint experts have followed the necessary training in SharePoint 2010 technology and are now ready to deploy and configure SharePoint 2010 within your organization.

For us, a Prototype is not just a 'Proof-of-Concept', it is not just the deployment of a test-environment or a server. For us, the prototype is primarily a full service.

It will help you in:

- Choosing the right architecture for your SharePoint prototype
- The actual SharePoint installation
- SharePoint-specific development and appropriate Testing
- The definition of a development life-cycle for your application
- An extensive presentation of new functions for SharePoint 2010
- The creation of a SharePoint "Dream-Team" within your organization

In fact, it will guide you through every step in the decision making process!

Sogeti's prototype offering

Sogeti offers you the following services:

1. Integration of a SharePoint 2010 prototype in your environment:

Installation and configuration of a SharePoint 2010 prototype which enables you to discover and use the SharePoint tools within a real life company setting, and this while taking into account your specific business needs.

2. Practical help and Advice on the different possible choices:

We will create a strategic report which allows you to implement the tool-prototype in an optimal manner. We will also provide you with a tactical report, which will help you in a fast and economical implementation, once the final version of SharePoint 2010 will be released.

3. Follow up of the implementation project:

A Kick-Off meeting, a meeting at the end of the prototype implementation and an installation-report will be provided. Your ICT-team will also be involved during the whole procedure, allowing them to ask questions to our SharePoint experts.

4. The next steps:

We are here to help you if you wish to go further with SharePoint 2010 technologies. We can guide you through, or take care of, the configuration, development or functional consultancy.
